## **UNION SERIES #65, MODEL A/D 110" DUAL HEAD HOT MELT ROLLER COATER**

Union Tool has designed and built the only working 110" wide dual head hot melt roller coater in the world. This dual head machine has the capability of changing from a single-sided coater to a double-sided coater with the flip of a switch.

When double side coating, both coating heads are parallel with each other to apply adhesive to both sides of the substrate. The single coating operation moves the top coating head away from the bottom and automatically locates a single Teflon coated roll in the same position. Hydraulic cylinders provide the movement for these rolls.

The machine was designed to laminate walls, floors and ceilings for the recreational vehicle (RV) industry.
