90-DEGREE TURN

The Union 90-Degree Turn is designed to receive printed circuit board materials as they exit a conveyORIZED system or process, and then transport them at a 90-degree arc so that the flow of the printed circuit boards changes 90 degrees. However, the dimensional position of the printed circuit boards on the conveyor does not change.

Construction: Welded tubular steel

Conveyor: PVC rubber covered discs are incorporated to drive the printed circuit board or board materials

Space: 36" x 36"

Power: Fractional horsepower DC motor

Speed: 0 to 30 l.f.p.m.

The 90-Degree Turn can be incorporated into any existing system or two 90-Degree units may be stacked to make a 180-Degree Turn.

The 90-Degree Turn is available in various sizes and with various pass line heights to meet individual needs.
