ROLLER COATER - FLASH-OFF DRYER

The Union Tool Corporation has combined a roller coater with a flash-off dryer to lubricate and dry blanks prior to drawing or stamping operations. This unit combines a Union Series #15 Model B 26" Roller Coater with a wire mesh belt conveyor and top and bottom flash-off ovens. This particular unit is designed to be portable and has an outside dimension of approximately 4' x 8'.

By incorporating Union standard size roller coaters of 14", 26", 38", 50", 62", and up with a metal mesh conveyor and drying unit, a complete coating system is achieved and can be installed as a permanent or mobile operation. The roller coater is equipped with variable-speed drive, automatic recirculating system and the ability to coat either or both sides in a single pass.

The flash-off oven features both infrared heat and air movement to completely dry both sides of the blank in a fairly short distance. The heat is variable up to 250 degrees.

The coater pictured is available for in-plant demonstrations within the Midwest region of the USA, allowing you the opportunity to test out different lubricants as well as view first hand the advantage of Union roller coaters in your production processes.

Call The Union Tool Corporation today and let the roller coater experts help you!
